

Stakeholder

Buy / risk / syllabus placement after LeWM · 13+3

ONE-LINER

High syllabus value as the generative-simulator counterweight to LeWM — buy it, but police the JEPA-category error.

SPINE: Generative video as physics simulator — Predict2.5 (flow T2W/I2W/V2W) + Reason1 + Transfer2.5 | PARALLEL to latent WMs (Dreamer/JEPA/LeWM)
| synth data · policy eval · closed-loop robotics/AV

Why schedule Dec 7 after LeWM?

Completes the WM triangle for Accompanying Models

Completes triangle

Students just saw compact LATENT JEPA-WM (LeWM); now see foundation-scale GENERATIVE video WM.

Physical AI product

NVIDIA open Cosmos stack — robotics + AV demos in one paper; open weights.

Hard club numbers

24/30 robot · PAI 0.768/0.810 · Transfer 3.5× · DreamGen IF · Bridge 24.95.

Homework path

Consume checkpoints: generate / transfer / AC Bridge — not 4096-H100 pretrain.

Syllabus triad placement

LeWM | V-JEPA 2-AC | Cosmos — PARALLEL poles

Pole B

LeWM

LATENT · compact
fast CEM · SIM
course-trainable

Pole B+

V-JEPA 2-AC

LATENT · real Franka
CEM planning
dense features

Pole C ★

Cosmos WFM

GENERATIVE · pixels
synth + eval + Transfer
infer checkpoints

Optional bridge: Dreamer / Ha as historical LATENT RL imagination. Session type already Accompanying Models (WM / Reasoning / Planning).

Buy card — what students walk away with

Decision-ready contrasts

Open WFM narrative

Code + ckpts under NVIDIA Open Model License — reproducible homework surface.

Must-cite numbers

24/30 · 0.768/0.810 · 24.95 · 0.394 LET-AP · 3.5× Transfer · 200M clips.

Tool choice lesson

When pixels/synth/eval vs when latent plan — Dec 7's fork.

Apps breadth

Robot Real2Real · AV multiview · DreamGen · Bridge AC in one systems paper.

Risk / teaching cost

Police these before they become exam wrong answers

44-page systems

Not a clean 8-page idea paper — Archaeologist must curate.

JEPA category error

Calling it “a JEPA” or “replaces 2-AC planning.”

Brand overshadow

Cosmos brand can eclipse Empiricist numbers — keep tattoo front.

Compute inaccessible

4096 H100 MFU table; students consume ckpts only.

Closed-loop language

Primary quantified robot result = offline aug, not online MPC.

DreamGen over-read

Tab.18 video IF $\neq$ VLA hardware SR.

Real2Real Transfer aug → Diffusion Policy success

Who consumes vs who should skip

Match tool to bottleneck

CONSUMERS

- Labs needing photoreal synth / Sim2Real
- VLA teams short on visual diversity
- AV stacks needing map→video what-ifs
- Syllabus after LeWM (WM fork lesson)
- Teams with ≥ 24 -80 GB GPU for infer

SKIP / DEFER

- Need fast onboard CEM only → LeWM/2-AC
- Course students “reproduce” 4096-H100
- Want certified real-only data
- Expect Newton-accurate physics engine
- Confuse video IF with robot task SR

Decision table — buy / build / cite

Stakeholder quick card

Need latent plan speed	LeWM / V-JEPA 2-AC	Do not DiT inside MPC
Need visual OOD synth	Transfer2.5 Real2Real	Cite 24/30 moral
Need photoreal eval	Predict2.5 infer (2B first)	14B if human prefs
Need AV multiview	Transfer auto/multiview	Course = cite only
Course proof	RC1/RC2/RC4 smoke outlines	Not PAI absolute / Tab.13 lab

Stakeholder — close

Takeaways + exam bite

1. Buy Cosmos as generative-simulator counterweight after LeWM — completes the WM triangle.
2. Police JEPA-category error and closed-loop language vs offline aug.
3. Open weights enable homework; 4096-H100 pretrain is not the homework.
4. Placement: LeWM | V-JEPA 2-AC | Cosmos triad — PARALLEL poles.

EXAM BITE

Why schedule Cosmos after LeWM, and name one teaching risk (JEPA category error or closed-loop overclaim).
