2026 BEHAVIOR bridge + follow-ups

11+3 min

arXiv 2512.10071 · BEHAVIOR Challenge 2025 · smoke-run paper club

Gap story — $22/50 \cdot 0.345 \rightarrow 0.611$

The gap — 22/50 tasks · 0.345 → 0.611

22 / 50

tasks succeed

0.345

post Val Q

0.611

oracle union

Hard half of the suite still fails. Edge for 2026 ≠ opaque longer pretrain alone.

Need sample-efficient post-train · skill curriculum · eval-time perception fidelity.

Per-task instance accuracy (Fig 4)

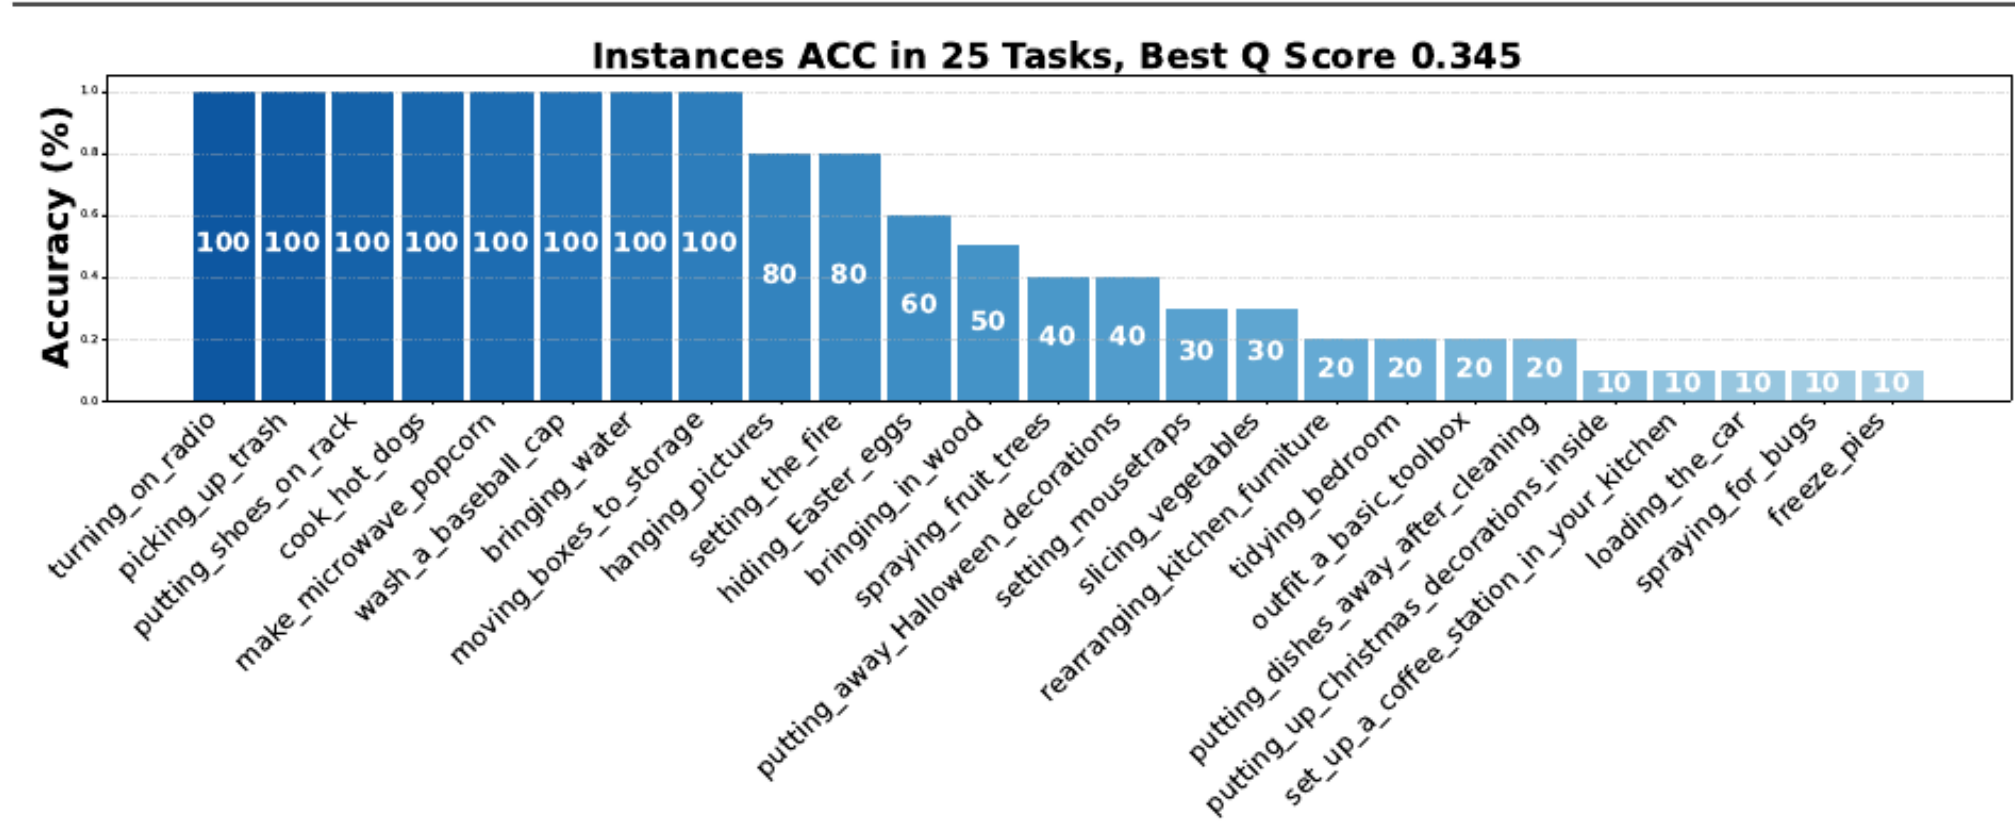

Figure 4: We can achieve an aggregated validation Q-score of 0.345 and a validation success rate of 15%

2026 edge

2026 BEHAVIOR edge

What likely wins — and what probably won't

✓ **Sample-efficient post-train**

DAgger / experts / denser rewards

✓ **Skill curriculum**

Imbalance is structural; reweight $\neq$ fix

✓ **Eval-time perception**

Resolution already doubled SR on radio

NOT enough alone

Opaque longer pretrain
without better post-train

Follow-up map

5

**Sim-to-real
of the recipe**

Don't over-claim

NOT a new foundation model

Adaptation of public $\pi 0.5$

NOT real-robot deployment

Sim BEHAVIOR-1K / OmniGibson

NOT household agent solved

22/50 · oracle gap 0.266

**Close 0.345→0.611 with better post-train —
not just more pretrain.**
